

ABSTRACT OF THE DISCLOSURE

A sanitary connection and drain device for mounting in a basin (1), such as a washbasin, a bidet, or a kitchen sink, is illustrated and described, having a feed (2), via which water may be supplied to the sanitary connection and drain device and subsequently delivered into the basin (1), and a drain (3), for water delivered into the basin (1), which is integrated into the sanitary connection and drain device.

Using the sanitary connection and drain device according to the present invention, the basin (1) only has to have one single opening, which is used, on one hand, to attach the sanitary connection and drain device and, on the other hand, as a drain of the basin (1).
